

## Pascal's Triangle

The triangle is usually set out like an isosceles triangle but I have set it out slightly differently:

	Col 0	Col 1	Col 2	Col 3	Col 4	Col 5	Col 6	Col 7	Col 8	Col 9
Row 0	1									
Row 1	1	1								
Row 2	1	2	1							
Row 3	1	3	3	1						
Row 4	1	4	6	4	1					
Row 5	1	5	10	10	5	1				
Row 6	1	6	15	20	15	6	1			
Row 7	1	7	21	35	35	21	7	1		
Row 8	1	8	28	56	70	56	28	8	1	
Row 9	1	9	36	84	126	126	84	36	9	1

1) The numbers in the triangle are selection numbers. (see chapter: Arrangements and Selections)

For example, the number in row 9 and column 3 is  $(9C3)$

2) We can generate each row of the triangle from the row above. To generate row 10:

$$(10C0)=1$$

$$(10C1)=(9C0)+(9C1)=1+9=10$$

$$(10C2)=(9C1)+(9C2)=9+36=45$$

$$(10C3)=(9C2)+(9C3)=36+84=120 \text{ etc}$$

3) Look at the numbers in row 7 of Pascal's triangle: 1, 7, 21, 35, 35, 21, 7, 1

$$\text{A typical number in this row is } (7C3) = \frac{7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1}{(3 \times 2 \times 1)(4 \times 3 \times 2 \times 1)}$$

After lots of cancelling, we are left with a positive integer. The 7 on the top of the fraction can't be cancelled out by numbers on the bottom of the fraction because 7 is prime. So  $(7C3)$  must be a multiple of 7

In general:

If  $p$  is prime then all the numbers in line  $p$  of Pascal's triangle will be a multiple of  $p$  (apart from the 1 at each end)

#### 4) Binomial theorem for multiplying out brackets

$$(1+x)^1 = 1+x$$

$$(1+x)^2 = 1+2x+x^2$$

$$(1+x)^3 = 1+3x+3x^2+x^3$$

$$(1+x)^4 = 1+4x+6x^2+4x^3+x^4$$

In general: if  $n$  is a positive integer

$$(1+x)^n = (nC0) + (nC1)x + (nC2)x^2 + (nC3)x^3 + \dots + (nCn)x^n$$

$$\text{sub in } x=1 \quad (nC0) + (nC1) + (nC2) + \dots + (nCn) = 2^n$$

$$\text{sub in } x=-1 \quad (nC0) - (nC1) + (nC2) - (nC3) + \dots = 0$$

$$\text{sub in } x=2 \quad (nC0) + 2(nC1) + 2^2(nC2) + \dots + 2^n(nCn) = 3^n$$

etc

By adding or subtracting the first two results we get:

$$(nC0) + (nC2) + (nC4) + \dots = 2^{n-1}$$

$$(nC1) + (nC3) + (nC5) + \dots = 2^{n-1}$$

#### EXERCISE

Write down row 10 of Pascal's triangle.

#### SOLUTION

1, 1+9=10, 9+36=45, 36+84=120, 84+126=210, 126+126=252, 126+84=210, 84+36=120, 36+9=45, 9+1=10, 1
